

End of Life

When a PowerPlus Energy battery is removed from service it can be returned to PowerPlus Energy for recycling.

Due to the stability and longevity of LFP cylindrical cells, returned batteries will be refurbished and checked so they can be repurposed for low power applications and made available for community, education and charity projects.

Any Lithium cells not suitable for repurposing will be sent to a licensed recycling facility, where all ferrous and non-ferrous metals are separated and then forwarded to our metals recycling partner.

Commitment to Sustainable Practices

As the nation's largest manufacturer of Lithium-ion batteries, we are committed to a greener future. PowerPlus Energy is currently engaging leading industry specialists to ensure the highest standards of safety and effective reuse when it comes to recycling lithium batteries.
